Lecture 5 Summarising Literature and Writing Skills

UNIVERSITY OF AUCKLAND

COMPSCI 289

Prof. Robert Amor

Learning Objectives

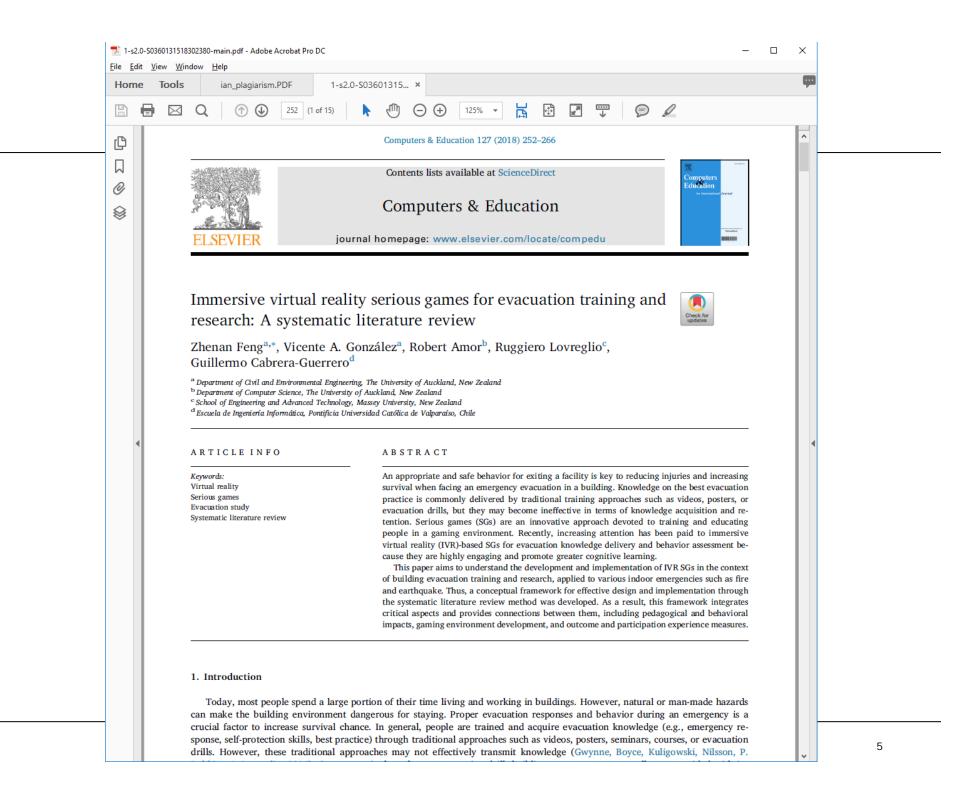

- Understand what exists in a literature review
- Learn the IEEE referencing style
- Learn to quote and reference correctly

What is a Literature Review?

- An account of what has been published on your topic of interest
- Purpose to critically analyze a segment of a published body of knowledge through summary, classification, and comparison of prior studies
- Not merely a descriptive list of the material available, or a set of summaries of relevant resources

Anatomy of a Paper or Report

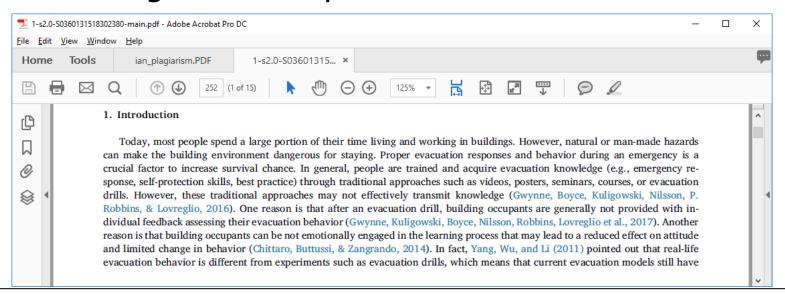

- Title
- Authors
- Abstract
- Keywords
- Introduction
 - Literature Review
- Main Body
- Conclusions
 - Future Work
- Acknowledgements
- References

The Format of a Literature Review

Introduction

- Why you are writing a review, why the topic is important, where does it fit in CS
- The scope of the review what will the discussion include and exclude
- The organisational pattern of the review

The Format of a Literature Review

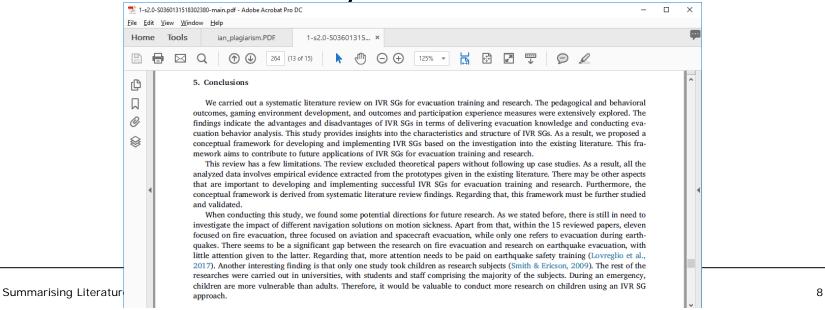

Body

- Headings and subheadings
- Summarize and evaluate the current state of knowledge
- Note major themes or topics, the most important trends, and any findings about which researchers agree or disagree
- Its purpose is to make an argument that will justify your proposed conclusions

The Format of a Literature Review

Conclusion

- A summary of the main agreements and disagreements in the literature
- The general conclusions that are being drawn
- Highlight gaps and indicate how previous research leads to your own conclusions

Writing the Literature Review

- Organise the section structure first
- Be selective
- Use quotes sparingly
- Summarise and synthesize
- Keep your own voice
- Use caution when paraphrasing (remember to cite)
- Focus on analysis, not description
- Revise, revise, revise

Systematic Literature Reviews (SLR)

- Methodology to identify all literature relevant to particular research questions
- Process includes
 - Identifying research
 - Search string
 - Publication databases
 - Selecting primary studies
 - Inclusion/Exclusion criteria
 - "How to Read a Paper"
 - Summarising papers, data extraction, classification
 - Data synthesis

I. CITING REFERENCES

A. References in Text

References need not be cited in the text. When they are, they appear on the line, in square brackets, inside the punctuation. Grammatically, they may be treated as if they were footnote numbers, e.g.:

as shown by Brown [4], [5]; as mentioned earlier [2], [4]–[7], [9]; Smith [4] and Brown and Jones [5]; Wood et al. [7]

NOTE: Use et al. when three or more names are given for a reference cited in the text.

or as nouns:

as demonstrated in [3]; according to [4] and [6]–[9].

Plagiarism

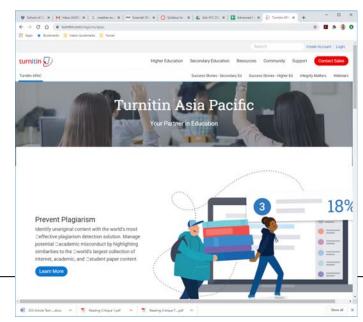

- Using the work of others without explicit acknowledgement and referencing, that is, plagiarism. It includes: use of other people's data without acknowledgement; use of published or unpublished expressions and ideas from other people without adequate attribution; use of published or unpublished charts, diagrams. (Student Academic Conduct Statute, UoA)
- Plagiarism is the representation of another author's language, thoughts, ideas, or expressions as one's own original work (Wikipedia)

Avoid Plagiarism

- Always acknowledge the sources
- Present as quotes Gallimore suggests that "valuers tend to give greatest weight to more recent information...." [12, p. 25].
- References included for:
 - Tables
 - Figures
 - Graphs or diagrams
- Self-plagiarism

Avoid Plagiarism

- Minimise what is quoted from other sources
 - 1-2 sentences
 - Almost never a paragraph
 - Many quotes strung together is not your writing
- Paraphrase
 - Really needs to be in your own words
- Plagiarism detection systems, UoA subscribes to:

Example Approaches

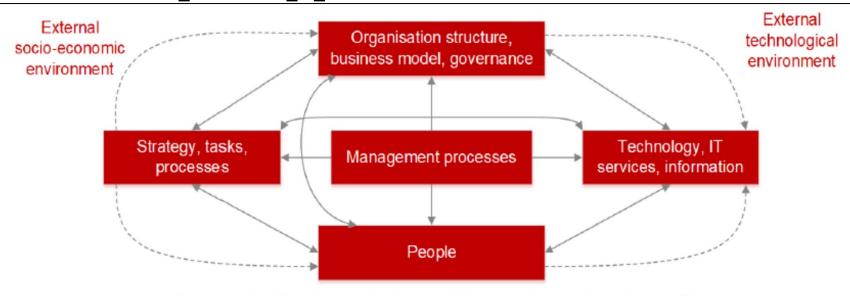

Figure 1: Modified Leavitt's diamond theory of technology impact [6]

Jones and Amor (2020)

Examples of a short direct quote:

Baez et al. have noted that "full 3D stacking can potentially offer additional advantages for memory and processor applications" [7, p. 14].

In fact, Wilde at al. [3, p. 21] suggest that energy storage is achieved "by means of static charge rather than of an electro-chemical process inherent to the battery".

If you need to leave some unnecessary words out of the quotation, use a set of dots (...), called an ellipsis, indicating a break in quotes.

As seen in [5, p. 14], "the proposed circuit has improved signal attenuation ... and has been experiencing less performance degradation due to resistor variation".

Summary

- Standard requirements for literature reviews
 - Not just summarizing papers
- Simple syntax for IEEE referencing
- Simple requirements for quoting text and figures
